

# ASSIGNMENT-1

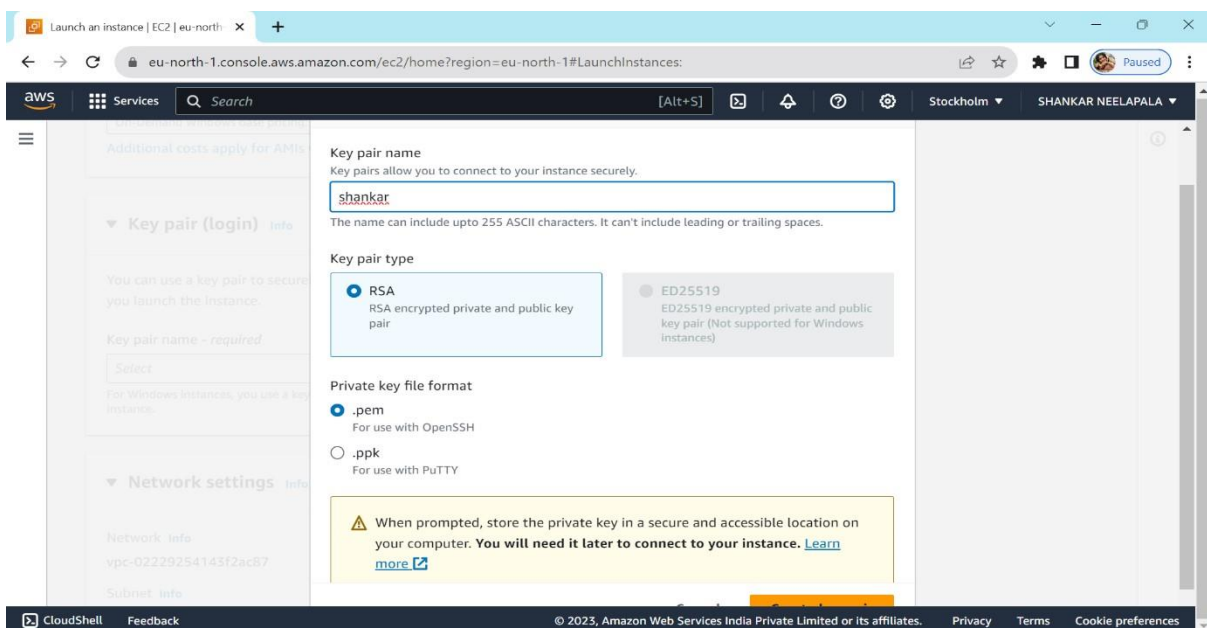

## How to create a windows instance:

**Step1:** Go to your AWS account in that click on EC2 service and then click on instance running or launch instance which is in orange color box.

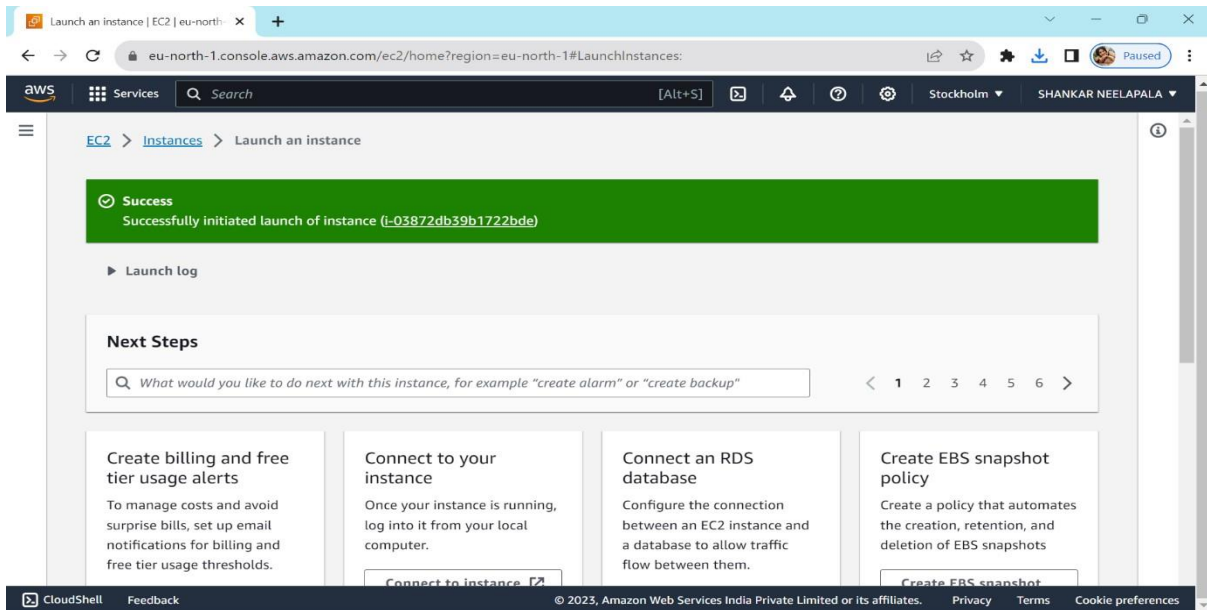

**Step2:** After that give a name to your instance and select the OS Microsoft windows (free tier eligible).

**Step3:** Then give a key pair name and create a key pair

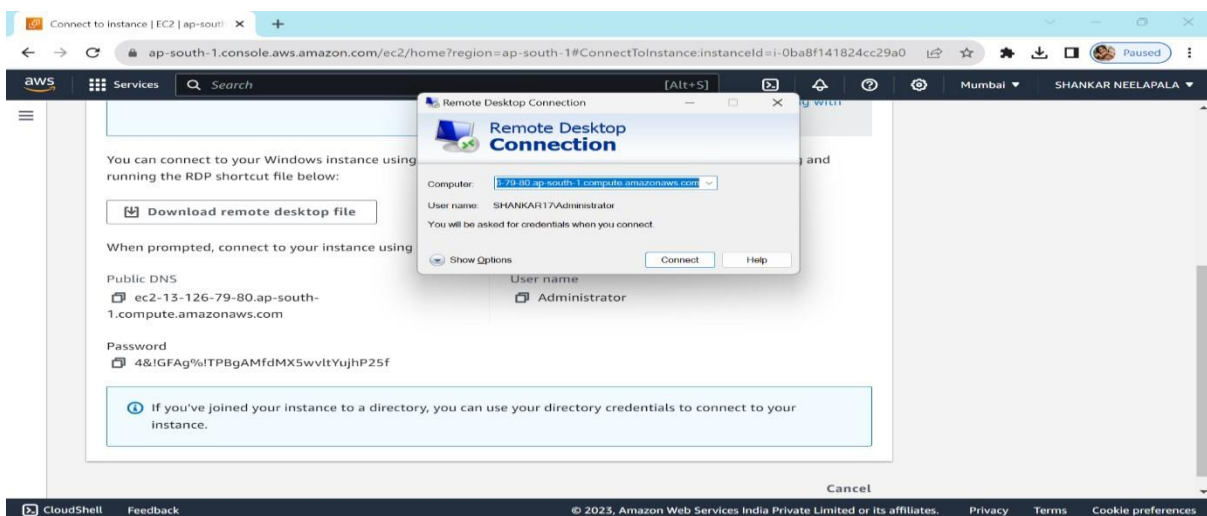

**Step4:** And then click on edit network settings and give security groups and go to the bottom & click on launch instance.

**Step5:** After that come to the instances running wait for 2 or 3mins for activating your instances (after seeing 2/2...) and then select the instance and connect.

**Step6:** Click on the instance id and click on RDC client and upload the created keypair file and then decrypt the code and connect.

**Step6:** Then open windows search bar and search for RDC and give public DNS and click on show more options and give username and connect.

**Step7:** And then give the password and connect. Your virtual windows instance has been created.
